Database

Data management solutions provider Logical Information Machines (LIM) has announced the 64-bit version of its Historis database that, according to the company, offers faster speeds, infinite capacity for data management, and improved analysis capabilities. Further according to the company, the database enables an insertion rate of more than 250,000 records per second and an extraction rate of more than 220,000 records per second. It is available for Sun servers and Linux.
